# 1. Installing YouTube Java

1.1. To use YouTube Java, you need the latest version of Java Virtual Machine (JVM) to run the program.

Please Visit: <http://java.com/en/> and click the button which says "Free Java Download". You will now be downloading Java, once this is complete; please double click on the installer file and follow the instructions to complete the installation of Java.

1.2. Get a copy of YouTube Java:

Go to our Website's Download section and get the file called YouTubeJava.jar :

<http://code.google.com/p/itb-cs/downloads/list>

**Note:** This is still Alpha quality software and has to go through a lot more testing and quality assurance.

1.3. Once you have a file called YouTube Java, simply double click on it to get it to launch. You should see a screen like this:

1.4. This completes the download and installation of YouTube Java!

## 2. Using YouTube Java

2.1. After you have completed the installation and launched YouTube Java, you have many different options to view videos:

- Buttons along the right hand side, which you can select a new list of videos: Most Viewed, Top Rated, etc

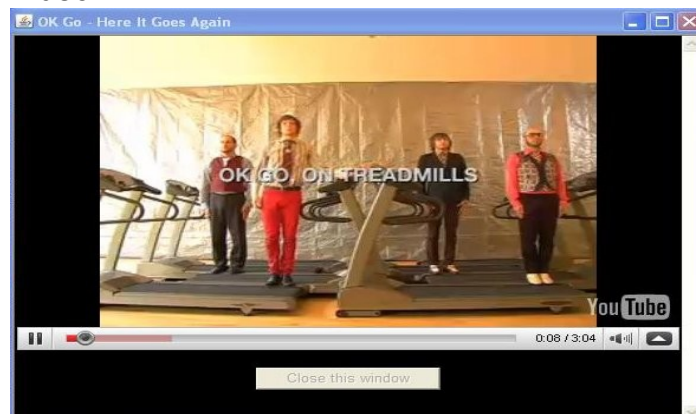

2.2. This will load a new list of videos like this:

from which you can select a list item to play. Simply left click on which ever item on the list takes your fancy and it will open up a window and play.

2.3. Playing a Video:

A Video now plays from the one you selected. You now have access to the video player controls using these buttons:

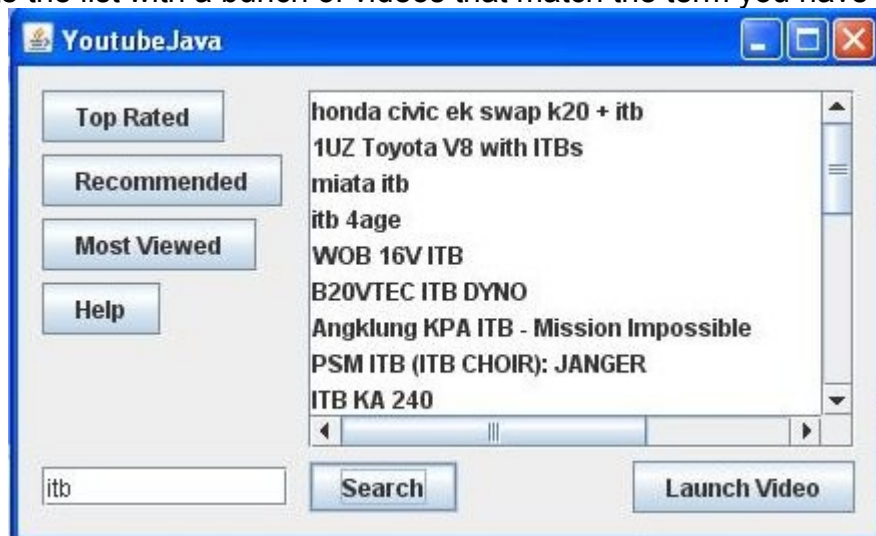

Play/Pause, a seek bar and an option to enlarge the video all appear and can be used.

### 3. Searching for a Video

3.1. When you start YouTube Java you should notice a search box in the bottom right-hand corner, like this which is highlighted

3.2. To Search you can simply enter in a term in the box; like: **itb** . This will populate the list with a bunch of videos that match the term you have entered:

Now simply select a result from the list (or if you not happy with the result set, repeat step 3.2 with a different search term). The video

will now play!

## 4. Uninstallation

4.1. To Uninstall YouTube Java; simply remove the *YouTubeJava.jar* that you downloaded in step 1.2. To do this; find the file named *YouTubeJava.jar* using your Search function, then right click on it and select delete. It will then appear in your Recycle Bin or Trash Can, from where you can permanently remove it.

## 5. Feedback

5.1 We the developers of YouTube Java, would be most grateful for any feedback you have about this program and how it works. It is an open source project at Google Code, so you can even inspect the source code to see how YouTube Java works.
